

Work From Home Policy

Company: Northwind Digital (fictional demo company)

1. Principles

Northwind Digital is a hybrid company. Work from home is a permanent entitlement for roles that are classified as remote-eligible, and a team-level arrangement for other roles.

2. Eligibility

- Remote-eligible roles: all Product, Engineering, Design and Research positions, plus any role explicitly listed in the HR system.
- Hybrid roles: Customer Success, Sales and Finance default to 2 office days per week.
- On-site roles: Facilities, Security and certain Operations roles require on-site presence on all working days.

3. Core collaboration hours

Employees must be reachable between 10:00 and 16:00 in their team's primary time zone. Outside these hours employees may work at times that suit them. Teams spanning 4 or more time zones nominate a 2-hour overlap window for synchronous collaboration.

4. Equipment and expenses

Each remote-eligible employee receives a one-time home office budget of 600 USD for a monitor, keyboard, chair or lighting. Employees may claim up to 45 USD per month towards home internet. A company laptop and security key are issued on the first day of remote work.

5. Security and data protection

All work must be performed on the company-issued device. The device must be locked whenever it is unattended and screen locking must not be disabled. Confidential HR and customer data must not be discussed in public places where it can be overheard.

6. Working from another country

Employees may work remotely from outside their country of employment for a maximum of 20 working days per calendar year, subject to People Operations approval and to tax and immigration review. Requests must be made at least 4 weeks in advance.

7. Measuring outcomes

Performance is measured on outcomes rather than presence. Employees are not expected to work fixed hours from home, but they must attend team rituals, one-to-ones and customer meetings in the agreed time zone.

8. Review

The policy is reviewed every 12 months by People Operations. Feedback can be submitted through the engagement survey or directly to the People Operations team.

Equipment requests are handled through the IT service desk.
